

## Tasks

1. We have a database that we already created in previous lecture (for advertisements), connect with PDO to that database.
2. Make a new page named `create_new_user.php`
  - a. Create a form for inserting new users. Get the user data with the help of the global `$_POST` variable and save it to the users table.
3. Make a new page named `create_new_profile.php`
  - a. Create a form that inserts a new profile for a user. Get the profile data with the help of the global `$_POST` variable and save it to the profiles table.
4. Make a new page named `create_new_ad.php`
  - a. Create a form for creating new ads. Get the ad data with the help of the global `$_POST` variable and save it to the ads table.
5. Make a new page named `list_ads.php`
  - a. Get all active ads in database paginated. An entry should show the ad's title, author's name and the time when it was created.
6. Make a new page named `update_ad.php`
  - a. Create a form for updating ads. Get the new ad data with the help of the global `$_POST` variable and update the correct record in the ads table.
